

Project Pixlr Summary

Pixlr is a great a Web 2.0 imaging editing, drawing tool application, and it is free. It is user friendly, runs in several languages, and offers many special effects on images. It can be used in the classroom for scrapbooks, blogs, school paper, web design, yearbooks, and art projects to name a few options. For example a rain forest class project can include, a student copying an image from the Internet. The student would then import the picture to Pixlr, they would then use the lasso tool to cut out an animal of their choice from the rain forest. The student would save the picture to their computer, import the image into the word processing page, and add some text to complete their project.
